

Do We Need A Technical Consultant?

In assessing your organization's needs the following must be considered:

- Are you and your staff experienced in
- Accredited CME Training Facilitation,
 - Medical Facility/Laboratory design, startup and operation, Assessments
 - Regulatory Compliance, Quality Assurance, and Personnel Management?

Many times Administrators, Managers, Medical Practice Owners, & Laboratory Directors try to delegate authority to those who may not be formally trained in these arenas *or* try to add these duties onto their already hectic management schedule.

Physicians' office laboratories using licensed clinical laboratory scientists as technical consultants or testing personnel are more than twice as likely to do well on proficiency testing as their counterparts using medical practice staff members alone.

Educational Programs

HEALTHCARE WORKFORCE CONTINUING EDUCATION PROGRAMS

In our International and Domestic endeavors we find that it is often the basic fundamental principles that are the most overlooked in laboratory and clinical service.

In light of the need of emphasis and at times a 'refresher' in these areas we are offering our "Back to Basics Boot Camp!" This intermediate level, accredited program allows for eight hours of live training in one day. Accredited by

- American Society of Clinical Laboratory Science (ASCLS) P.A.C.E.® CE Provider # 560

- American Association of Medical Assistants (AAMA) Continuing Education Provider #II9I83 (General and Clinical Education Credits)

Many laboratories have personnel that come from different educational institutions and backgrounds, and many challenges that arise come from varying degrees of fundamental knowledge. To aid in harmonizing your personnel and provide education on cutting edge technology, our organization also offers training on the following topics:

- Quality Management for the Healthcare Industry
- Harmonization in Healthcare
- Fine Needle Aspirate Sample Collection and Processing
- Extrapulmonary TB/HIV Diagnostic Testing
- "Lean, Green Healthcare Machine" - How to improve efficiency and the ecological impact of your healthcare services

Laboratory Accreditation Technical Support

Up to 70% of all medical diagnoses are based upon laboratory results. In providing these critical services in patient care it is imperative that excellence is not only achieved but maintained.

According to the United States Department of Health and Human Services (HHS) laboratory facilities which perform even the most basic "waived" tests must ensure that either their staff or site be certified to maintain CLIA compliance.

Low testing volume Physician Operated Laboratories (POL) to high testing volume commercial or hospital laboratories understand that accreditation is the key to ensuring the highest level of Quality Assessment and Quality Control standards.

For over 45 international laboratories for PEPFAR, public health laboratories, and private clinical offices MLT Consultants has provided professional, courteous, yet transparent expertise to our clients to ensure that they are compliant with local and Federal Government regulations, professional societies as well as insurance providers for liability concerns.

- WHO- AFRO SLMTA/SLIPTA ACCREDITATION
- CLIA/CMS, COLA, JCAHO, CAP , INSURANCE Compliance
- Confidential Laboratory Assessments
- Quality Assurance/Quality Control Integration and Implementation
- Laboratory Director Support Services
